

## About Us

At Greencore Recycling, we are committed to shaping a sustainable future by revolutionising tire recycling. Our expertise lies in the responsible collection and processing of End-of-Life Tires (ELTs), ensuring they are repurposed efficiently to minimise environmental impact and support the circular economy.

# Greencore Recycling

Driving Sustainability in ELT  
Tire Management.

## Industry Leaders in ELT Recycling:

Operating across Europe and soon expanding into North America, we specialise in collecting and recycling all types of tires. Our fully certified facilities hold waste management licenses (Type R3, R12, and R13), ensuring compliance with the highest industry standards.

## Skilled and Experienced Team

Our core team comprises highly experienced professionals who have spent years mastering the complexities of tire recycling. Their expertise forms the foundation for training new team members, focusing on essential aspects such as workplace safety, compliance, and the safe operation of our state-of-the-art machinery.

# Commitment to Innovation and Growth

At Greencore Recycling, we embrace innovation to enhance our processes and maximise resource recovery. Our management team brings extensive experience in launching and scaling businesses, with a strategic focus on mergers, acquisitions, and identifying market trends that drive profitability and sustainability.

## Advanced Recycling Solutions

Greencore Recycling employs cutting-edge technology and equipment to optimise the recycling process. Our advanced machinery line-up includes tire baler machines, Tyre Conveyors, and OTR Tyre Sidewall Cutters. These essential tools enhance efficiency in handling ELTs by compacting, transporting, and preparing tires for further processing.

### Tire Baler Machines:

Compress waste tires into tightly bound bales, significantly reducing storage space and transportation costs.

### Tyre Conveyors:

Streamline the movement of tires through the recycling process, enhancing productivity and automation.

### OTR Tyre Sidewall Cutters:

Designed for off-the-road (OTR) tires, these machines facilitate easier handling and processing of large industrial tires.

By utilising this state of the art equipment, we ensure that ELTs are efficiently repurposed for various applications, including construction projects, civil engineering applications, shredding, pyrolysis, and energy recovery plants.

# Your Global Partner in Recycling Excellence

Greencore Recycling utilises the most advanced and sophisticated machinery from the best producers in the market. Tire recycling is the most practical and environmentally friendly way of disposing of tires that are no longer fit for use. Due to their durability and large volume, tires are one of the most challenging sources of solid waste. Globally, an estimated 2.5 million tires are discarded annually.

## Partner with Us

**CLICK HERE**

At Greencore Recycling, we are your trusted partner in sustainable tire disposal and recycling. We welcome tire industry professionals to collaborate with us in managing surplus or end-of-life tires efficiently and responsibly.

Be part of the change – let's create a cleaner, greener future together. Contact us today to explore collaboration opportunities!
